

Mini is a compact and flexible tilt monitor designed for easy installation and reliable field monitoring. Despite its small form factor, it delivers accurate measurement data and is particularly well suited for projects where space, discretion, and rapid deployment are essential.

Its energy-efficient design, combined with remote management capabilities, makes GSS Mini a convenient and cost-effective choice for both temporary and long-term monitoring. As a complement to GSS Pod and MIC-S01, it can also form part of a compact and flexible monitoring solution.

Mini is developed by Global Sensing Solutions Limited.

**Biaxial tilt**

**Cost effective**

**Tiny case**

**Sound monitoring with microphone**

**Low power usage**

**Use together with POD**

## BENEFITS WITH MINI

- All-in-one, no cables needed for tilt monitoring
- Tiny case, fits in the palm of your hand
- Use together with MIC-S01 for compact and cost effective noise monitoring
- Easy integration into any system
- Data sovereignty
- Multiple communication module options – 3G/4G/LTE, Wi-Fi
- Antenna extension cables available for a stronger signal
- Different mounting plates for various applications
- Auto-orientation, mount in any orientation
- IP67-classed
